# Elastic Security

Open source, AI-driven

Elastic Security delivers unified SIEM, XDR, and cloud security on an open source foundation trusted by developers and scaled by enterprises. Driven by transparent, context-aware AI and open detection rules, Elastic enables fast, accurate threat detection, investigation, and response.

Federated search correlates petabytes of data in real time without the cost and complexity of traditional tools. Built for flexibility, it integrates with your existing ecosystem, scales effortlessly, and puts you in full control.

With usage-based pricing and no hidden fees, Elastic gives SOC teams the visibility, speed, and efficiency they need at a price they can afford. AI is transforming security operations. Explore Elastic Security today.

Security for the AI era

PROTECT, INVESTIGATE & RESPOND

Bring your data

- Network
- User
- Threat intel
- Cloud providers

Extended protection   Optional / Included
Leverage your security protection tools

- Endpoint
- Cloud

Native protection   Optional / Included
Block threats with Elastic native protection

- Servers and VM's
- Workstations
