

ELASTIC WORKPLACE SEARCH

A one-stop answer shop for your teams

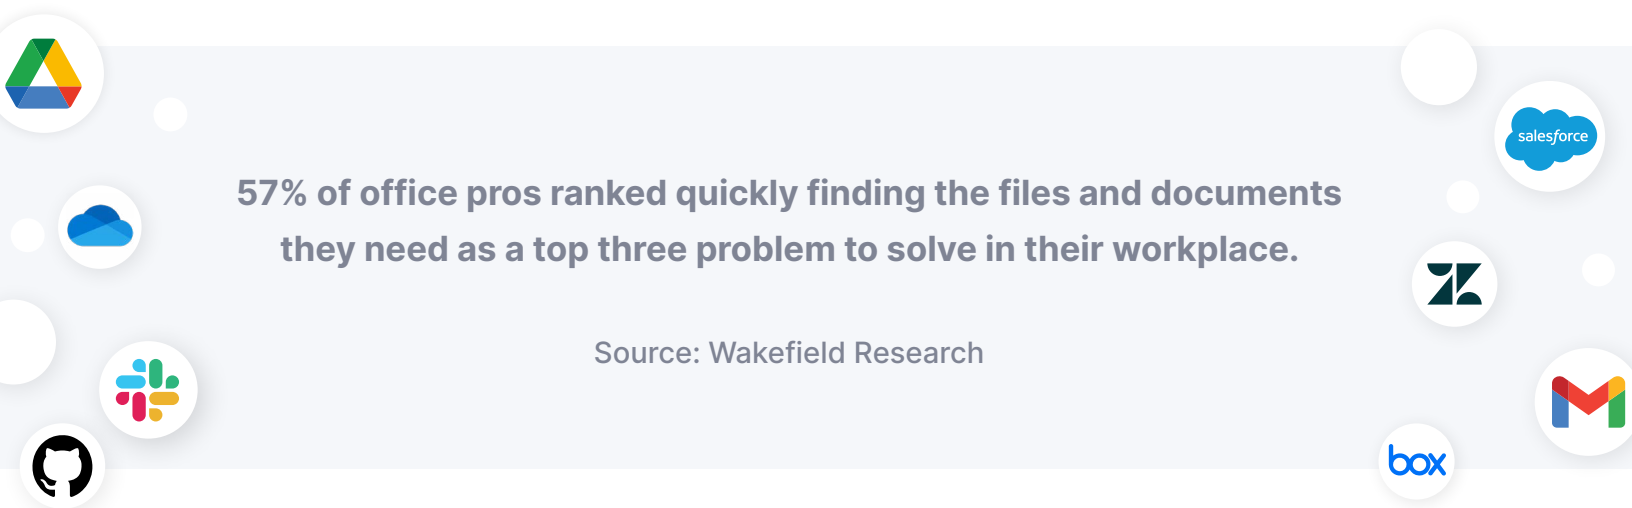

With work happening faster and in more distributed ways than ever, a wealth of content is created in real time on a broad range of collaboration tools. Optimal business outcomes, and the decision making that leads to them, hinge on the ready availability of quality data and information from those apps.

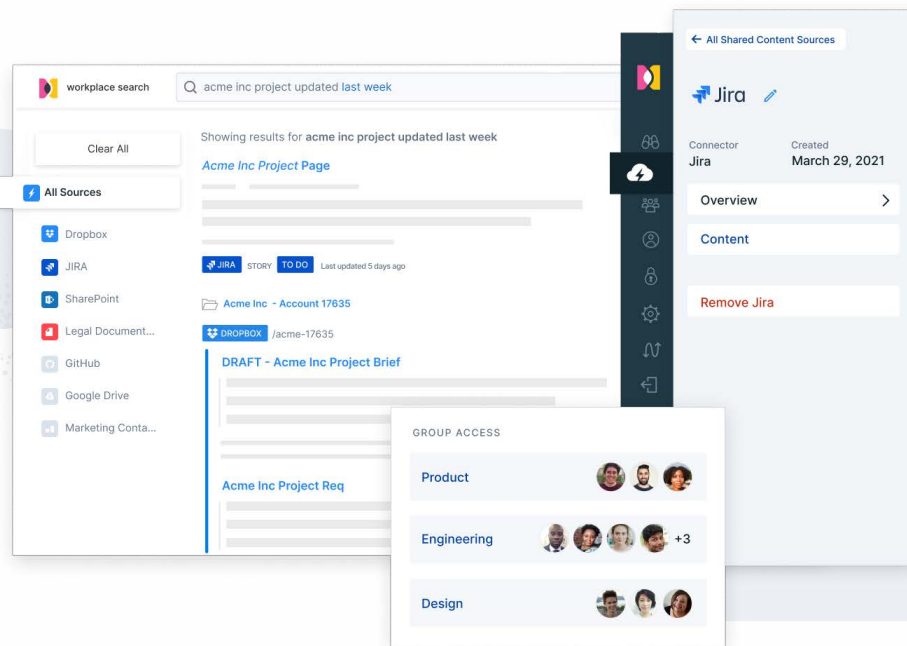

Elastic Workplace Search is rooted in a simple but powerful idea: a centralized way to search over the knowledge scattered across all the tools your teams use every day, deployed at scale in a matter of hours or days.

57% of office pros ranked quickly finding the files and documents they need as a top three problem to solve in their workplace.
